

# SuperSoft Inkjet Transfer Paper for White and Light Colored Fabrics #IJSP

## WHY IS THIS PRODUCT UNIQUE?

- Soft hand
- Transferred images appear “natural” with little or no cracking
- Iron directly on transferred images without coatings sticking to the iron
- Hot or cold peel has similar image characteristics
- Iron or heat press gives similar image appearance
- Can be used on different fabrics and no special laundry instructions are necessary

## IMAGE PRINTING (DO NOT OVERSATURATE COLORS. IT WILL NOT ENHANCE TRANSFER QUALITY – A LITTLE COLOR GOES A LONG WAY)

1. Design or select image on the computer
2. Mirror image before printing
3. Print image on the white dull side of transfer paper (the back will be blue or have some other distinguishing feature, do not print on the back)
4. Allow printed image to dry before transferring

## SUGGESTED PRINTER SETTINGS

Printer	Paper Setting	Image Quality Setting
Lexmark	T-Shirt Transfer	Best
HP DeskJet	T-Shirt Transfer	Best
Canon	T-Shirt Transfer	Default
Epson C86 / C88	Plain Paper	Photo / Best Photo
Epson 1280	360 DPI	Photo / Best Photo
Epson R200	Photo – Quality Inkjet	Photo / Best Photo
Epson 4000	Photo – Quality Inkjet	Automatic

## HEAT TRANSFER APPLICATION

### Commercial Heat Press

- Set heat press at 375° and 400° Fahrenheit and allow it to come up to set point
- Set press for medium pressure
- Pre-heat garment/fabric for a few seconds to remove moisture or wrinkles
- Position transfer paper face down and press for 25-30 seconds
- Remove paper while hot or cold

### Home hand Iron

- It is best to use a smooth, hard, non-porous surface.
- Pre-heat iron to highest setting (**Cotton/Linen**) DO NOT ADD WATER TO THE IRON
- Allow the iron to pre-heat for 5 minutes.
- Place a pillowcase on the ironing surface and iron it to remove any wrinkles.
- Position transfer paper face down onto the garment.
- Using FIRM STEADY PRESSURE, holding the iron with both hands and applying your body weight, iron each area of the transfer sheet for 20 seconds. Lift the iron each time you change direction—make sure you overlap each area. Thoroughly iron all of the edges, corners and center of the transfer sheet for a **TOTAL** ironing time of 2-3 minutes for the entire transfer. Longer pressing times may be necessary for larger transfers or thicker fabrics.
  - Remove paper while hot or cold.

**LAUNDRY INSTRUCTIONS** – Wash & dry your transfer according to your fabric’s normal washing instructions. **You can iron directly on the transfer.**

**STORAGE INSTRUCTIONS** – Always store unused paper in a cool, dry area. Keep it sealed in a plastic bag so paper is not exposed to any excess moisture.

**NOTE:** Testing procedures to simulate real world use have been established and applied to our paper products in our technical and research department. We have tested our products multitude substrates; using different printers, transfer equipment, detergents washing processes, etc. We still recommend that you test the paper on your chosen printer and material, as it is impossible to duplicate every printing or transfer application.
